

Remote Monitoring Service Model for JSM Assets and Service Catalog

This page provides a refined service model for the Remote Monitoring (FIJI) platform to support Jira Service Management Assets (CMDB), Service Catalog design, service ownership alignment, and Backstage catalog onboarding in the Brightlayer Site Reliability Engineering space.

 This model is derived from Remote Monitoring documentation and related architecture pages. Where ownership or boundaries are not explicitly documented, entries are marked as **UNKNOWN – requires Backstage catalog validation**.

Platform Scope

The Remote Monitoring platform, commonly referred to as **FIJI**, is a multi-tenant cloud SaaS platform for remote monitoring, device management, alarming, analytics, and external integration workflows. From an SRE perspective, the platform supports multiple customer-facing experiences while relying on a shared set of platform services, domain services, and infrastructure configuration items.

Recent Remote Monitoring service inventory references such as [List of Services](#) and [Central list - Supported devices in FIJI](#) should be used alongside this page during validation.

Logical Service Domains

Domain	Description	Primary Service Types
--------	-------------	-----------------------

Business Applications	Customer-facing portals and apps that expose platform capabilities to specific user groups.	Business Services
Identity and Access	Authentication, authorization, entitlements, and tenant administration.	Shared Platform Services
Monitoring and Alarms	Telemetry-driven alerting, correlation, alarm lifecycle management, and energy monitoring.	Domain Services
Device Management	Device inventory, onboarding, commissioning, firmware, and segment-specific device logic.	Domain Services
Analytics and Prediction	Condition monitoring, anomaly detection, and predictive maintenance capabilities.	Domain Services
Production and Quality	Manufacturing-oriented OEE, downtime, SPC, and quality workflows.	Domain Services
Integration and Orchestration	Workflow automation, external connectors, and operational integration flows.	Domain Services

Presentation and UX	Gateway, dashboard, localization, and shared user experience capabilities.	Shared Platform Services
Data and Semantic Models	Ontology, ERP-linked entitlement data, telemetry stores, and feature data.	Shared Platform Services and CIs
Infrastructure and External Dependencies	AKS, Azure services, databases, eventing, edge gateways, and SaaS dependencies.	Configuration Items

Table 1 — Services

Name	Type	Description	Owner	Tier	Upstream	Downstream
Brightlayer Remote Monitoring – FIJI Platform	Business Service	Multi-tenant cloud platform for remote monitoring, device management, alarming, analytics, and integrations across supported segments.	UNKNOWN – requires Backstage catalog validation	Tier 0	All technical services and core infrastructure	Ops Console, Plant Console, Production Console, Energy Console, Technician Mobile App

Ops Console	Business Service	Customer-facing portal for data center operations use cases including alarms and power-related monitoring views.	UNKNOWN – requires Backstage catalog validation	Tier 1	Monitoring Service, Alarm Service, Energy Service, Dashboard Service, Gateway Service	Customer operators
Plant Console	Business Service	Customer-facing portal for industrial asset health, condition monitoring, and predictive maintenance workflows.	UNKNOWN – requires Backstage catalog validation	Tier 1	Condition Monitoring Service, Predictive Analytics Service, Dashboard Service, Gateway Service	Plant managers, reliability users
Production Console	Business Service	Customer-facing portal for manufacturing operations, OEE, downtime visibility, and production	UNKNOWN – requires Backstage catalog validation	Tier 1	Production/OEE Service, Quality/SPC Service, Dashboard Service, Gateway Service	Production managers, supervisors

		insight workflows.				
Energy Console	Business Service	Customer-facing portal for energy management views such as PUE/DCiE and energy anomaly reporting.	UNKNOWN – requires Backstage catalog validation	Tier 1	Energy Service, Reporting and Compliance, Dashboard Service, Gateway Service	Energy managers
Technician Mobile App	Business Service	Mobile experience for technicians performing operational workflows, work orders, and device tasks.	UNKNOWN – requires Backstage catalog validation	Tier 1	Device Management Service, Workflow/Orchestrator, Gateway Service	Technicians and field users
Authorization Service	Technical Service	Cross-cutting authorization enforcement service providing access control across platform	UNKNOWN – requires Backstage catalog validation	Tier 0	Okta, Entitlement Service	All services

		APIs and services.				
User Service	Technical Service	Identity and user profile management service for platform users.	UNKNOWN – requires Backstage catalog validation	Tier 1	Okta, PostgreSQL	Entitlement Service, Realm Administrator Service, all user-facing apps
Entitlement Service	Technical Service	Manages roles, permissions, subscriptions, licenses, and feature entitlements.	UNKNOWN – requires Backstage catalog validation	Tier 1	User Service, PostgreSQL, ERPS Service	Authorization Service, Device Management Service, business applications
Realm Administrator Service	Technical Service	Manages tenant-specific configuration and administrative boundaries.	UNKNOWN – requires Backstage catalog validation	Tier 1	User Service, PostgreSQL	Tenant-scoped services
Realtime Consumer Service	Technical Service	Core telemetry ingestion service for real-time data flowing from edge	UNKNOWN – requires Backstage catalog validation	Tier 0	Azure Event Hub, Azure IoT Hub, Kafka via Dapr	Monitoring Service, Alarm Service, Condition Monitoring Service, Production/

		or cloud-connected devices.				OEE Service, Energy Service
Monitoring Service	Technical Service	Executes real-time monitoring rules, thresholds, event correlation, and alert generation.	UNKNOWN – requires Backstage catalog validation	Tier 0	Realtime Consumer Service, Kafka via Dapr, TSDB, PostgreSQL	Alarm Service, Notification Service, Workflow/Orchestrator, business applications
Alarm Service	Technical Service	Manages alarm lifecycle, state transitions, and alarm usage across tenants and modules.	UNKNOWN – requires Backstage catalog validation	Tier 1	Monitoring Service, Realtime Consumer Service, Elasticsearch	Ops Console, Notification Service, Workflow/Orchestrator
Telemetry Cloud Alarm Service	Technical Service	Provides high-scale telemetry-driven alarm processing and specialized telemetry alarm logic.	UNKNOWN – requires Backstage catalog validation	Tier 0	Azure Event Hub, Kafka via Dapr, Realtime Consumer Service	Monitoring Service, Alarm Service
Energy Service	Technical Service	Computes and serves	UNKNOWN – requires	Tier 1	Realtime Consumer	Ops Console,

		energy efficiency, power quality, and energy anomaly capabilities.	Backstage catalog validation		Service, TSDB	Energy Console, Reporting and Compliance
Device Management Service	Technical Service	Shared service for device inventory, firmware management, OTA workflows, configuration templates, and operational lifecycle control.	UNKNOWN – requires Backstage catalog validation	Tier 1	Elasticsearch, Azure Table Storage, BLC, Ontology Service	Technician Mobile App, Device Adapter Services, Integration Hub
Device Adapter Services	Technical Service	Segment-specific device logic for onboarding, commissioning, and protocol-specific behavior.	UNKNOWN – requires Backstage catalog validation	Tier 1	Device Management Service, EPAS, Starfish Gateway	Segment-specific monitoring and device workflows
Condition Monitoring Service	Technical Service	Performs condition monitoring analytics	UNKNOWN – requires Backstage	Tier 1	Realtime Consumer Service, TSDB,	Predictive Analytics Service,

		such as vibration, waveform, thermal analysis, and scoring.	catalog validation		Feature Store	Plant Console
Predictive Analytics Service	Technical Service	Generates anomaly scores, remaining useful life estimates, and predictive insights.	UNKNOWN – requires Backstage catalog validation	Tier 1	Condition Monitoring Service, Feature Store, TSDB	Plant Console, Monitoring Service, Workflow/O rchestrator
Production/ OEE Service	Technical Service	Supports manufacturing line states, OEE calculations , downtime capture, and bottleneck detection.	UNKNOWN – requires Backstage catalog validation	Tier 1	Realtime Consumer Service, Kafka via Dapr	Production Console, Quality/SP C Service, Reporting and Compliance
Quality/SP C Service	Technical Service	Provides statistical process control rules, quality correlation logic, and quality-oriented	UNKNOWN – requires Backstage catalog validation	Tier 2	Production/ OEE Service, PostgreSQL	Production Console, Reporting and Compliance

		exception handling.				
Integration Hub	Technical Service	Supports northbound and southbound integrations including OT protocols, enterprise systems, and webhooks.	UNKNOWN – requires Backstage catalog validation	Tier 0	Kafka via Dapr, secrets management CI not identified	CMMS, MES/ERP, BMS/EMS, ITSM, Workflow/Orchestrator
Workflow/Orchestrator	Technical Service	Executes event-driven and operational workflows including approval, escalation, and action orchestration.	UNKNOWN – requires Backstage catalog validation	Tier 1	Kafka via Dapr, Monitoring Service, Integration Hub, Automation Service	Technician Mobile App, external systems, customer workflows
User Automation Service	Technical Service	Tenant-facing automation capability for user-defined rules and automation workflows.	UNKNOWN – requires Backstage catalog validation	Tier 2	Automation Service, Scheduler Service	Workflow/Orchestrator, customer automation use cases

Automation Service	Technical Service	Shared automation engine that executes scheduled and event-driven workflow logic.	UNKNOWN – requires Backstage catalog validation	Tier 1	Scheduler Service, Kafka via Dapr	User Automation Service, Workflow/Orchestrator
Gateway Service	Technical Service	API gateway layer providing routing, gateway policy enforcement, and OIDC integration.	UNKNOWN – requires Backstage catalog validation	Tier 0	Azure APIM / NGINX, Okta	All external consumers and business applications
Dashboard Service	Technical Service	Shared visualization and dashboard capability used by customer-facing consoles.	UNKNOWN – requires Backstage catalog validation	Tier 1	Gateway Service, domain services	Ops Console, Plant Console, Production Console, Energy Console
Localization Service	Technical Service	Shared internationalization, localization, and regional	UNKNOWN – requires Backstage catalog validation	Tier 2	PostgreSQL	All UI-facing services

		settings capability.				
Audit Service	Technical Service	Provides audit log capture and standard audit/logging integration for platform services.	UNKNOWN – requires Backstage catalog validation	Tier 1	PostgreSQL, Azure Blob Storage	All services, Reporting and Compliance
Notification Service	Technical Service	Shared email, SMS, voice, and notification delivery capability.	UNKNOWN – requires Backstage catalog validation	Tier 1	SendGrid, Twilio, Kafka via Dapr	Monitoring Service, Alarm Service, Workflow/Orchestrator, business applications
Reporting and Compliance	Technical Service	Generates reports, signed PDFs, audit-oriented outputs, and compliance artifacts.	UNKNOWN – requires Backstage catalog validation	Tier 2	Audit Service, Azure Blob Storage, domain services	Energy Console, Production Console, external compliance consumers
Ontology Service	Technical Service	Provides reusable device semantic models, schemas,	UNKNOWN – requires Backstage catalog validation	Tier 1	BLC, PostgreSQL	Device Management Service, Device Adapter Services,

		and profiles used across platform domains.				analytics services
ERPS Service	Technical Service	Supports ERP-linked entitlement or product-license mapping workflows referenced by data store documentation.	UNKNOWN – requires Backstage catalog validation	Tier 2	MongoDB	Entitlement Service

Shared Platform Services Used Across Multiple Products

Shared Service	Why It Is Shared	Consumers
Authorization Service	Cross-cutting access enforcement across all services and APIs.	All services and user-facing apps
Gateway Service	Single ingress layer for APIs and external consumers.	All consoles, mobile app, integrations
Realtime Consumer Service	Common telemetry ingestion path for multiple monitoring and analytics domains.	Monitoring, alarms, analytics, OEE, energy
Notification Service	Shared communication delivery plane.	Monitoring, alarms, workflows, customer-facing experiences

Audit Service	Common compliance and audit logging requirement.	All services
Scheduler Service	Reusable timed execution and background task engine.	Automation, reporting, rollout tasks
Dashboard Service	Shared presentation layer for multiple business applications.	Ops, Plant, Production, Energy consoles
Ontology Service	Common semantic model used across device and analytics capabilities.	Device, monitoring, analytics domains
Automation Service	Common automation engine supporting multiple workflow consumers.	User Automation, Workflow/Orchestrator

Table 2 — Service Offerings

Name	Description	Associated Service	Request Type Candidate
Tenant Provisioning	Provision a new customer tenant and its administrative structure.	Realm Administrator Service, User Service, Entitlement Service	New Tenant Onboarding

User Access Request	Grant or modify tenant user roles and permissions.	User Service, Entitlement Service, Authorization Service	Access Request
Device Onboarding	Register, commission, and activate devices or gateways.	Device Management Service, Device Adapter Services	Device Registration Request
Firmware Rollout	Plan and execute firmware or configuration rollout activities.	Device Management Service	Firmware Update Request
Integration Setup	Configure a new external connector or protocol integration.	Integration Hub	Integration Setup Request
Subscription Change	Modify license, entitlement, or feature subscription parameters.	Entitlement Service, ERPS Service	Subscription Change Request
Custom Automation Rule	Create or update tenant-specific automation rules.	User Automation Service	Automation Rule Request
Report Generation	Generate compliance, SLA, or operational reports.	Reporting and Compliance	Report Request

Table 3 — Configuration Items (CIs)

Name	CI Type	Description	Owner	Related Service
Azure AKS Cluster(s)	Container Platform	Kubernetes clusters hosting FIJI services and sidecars.	UNKNOWN – requires Backstage catalog validation	All technical services
Azure APIM / NGINX	API Gateway Infrastructure	Gateway infrastructure supporting API routing and policy enforcement.	UNKNOWN – requires Backstage catalog validation	Gateway Service
Dapr Runtime	Application Runtime	Sidecar/runtime used for pub/sub and service integration patterns.	UNKNOWN – requires Backstage catalog validation	Event-driven services
Kafka	Messaging Platform	Event bus used through Dapr pub/sub for service-to-service events.	UNKNOWN – requires Backstage catalog validation	Monitoring, workflows, automation, integrations
Azure Event Hub	Event Streaming	Cloud event ingestion service for telemetry and streaming use cases.	UNKNOWN – requires Backstage catalog validation	Realtime Consumer Service, Telemetry Cloud Alarm Service
Azure IoT Hub	IoT Connectivity	Device connectivity and cloud communication layer for IoT-capable flows.	UNKNOWN – requires Backstage catalog validation	Realtime Consumer Service, Device Management Service

PostgreSQL	Relational Database	Primary relational store for identity, entitlements, tenancy, audit, and other metadata.	UNKNOWN – requires Backstage catalog validation	User Service, Entitlement Service, Realm Administrator Service, Audit Service, Quality/SPC Service
Elasticsearch	Search and Analytics Store	Search-oriented and event index store for device and alarm-related data.	UNKNOWN – requires Backstage catalog validation	Device Management Service, Alarm Service
MongoDB	Document Database	Document-oriented data store referenced for ERPS and predictive-related collections.	UNKNOWN – requires Backstage catalog validation	ERPS Service, Predictive Analytics Service
TSDB (InfluxDB/TimescaleDB)	Time-Series Database	Time-series store for telemetry, energy, monitoring, and analytics workloads.	UNKNOWN – requires Backstage catalog validation	Monitoring Service, Condition Monitoring Service, Production/OEE Service, Energy Service
Azure Data Explorer (ADX)	Analytics Database	Historical telemetry and trend analytics dependency referenced through BLC.	UNKNOWN – requires Backstage catalog validation	Historical analytics capabilities

Feature Store	ML Data Store	Feature repository used by analytics and predictive services.	UNKNOWN – requires Backstage catalog validation	Condition Monitoring Service, Predictive Analytics Service
Azure Blob Storage	Object Storage	Stores reports, binaries, waveform content, and other object data.	UNKNOWN – requires Backstage catalog validation	Audit Service, Reporting and Compliance, Device Management Service
Azure Table Storage	NoSQL Store	Stores device commission or operational metadata.	UNKNOWN – requires Backstage catalog validation	Device Management Service
Okta	External Identity Provider	Authentication and identity provider for SSO, OIDC, and OAuth workflows.	UNKNOWN – requires Backstage catalog validation	Authorization Service, User Service, Gateway Service
SendGrid	External SaaS	Email delivery provider for notifications.	UNKNOWN – requires Backstage catalog validation	Notification Service
Twilio	External SaaS	SMS and voice communications provider.	UNKNOWN – requires Backstage catalog validation	Notification Service
BLC (Brightlayer Cloud)	External Platform Dependency	Platform dependency for shared sites, ontology, and analytics-related capabilities.	UNKNOWN – requires Backstage catalog validation	Ontology Service, Device Management Service, User Service

EPAS	External Platform Dependency	Product or device authentication-related dependency referenced for device workflows.	UNKNOWN – requires Backstage catalog validation	Device Adapter Services
Starfish Gateway	Edge Gateway	Gateway solution supporting device connectivity and data publishing.	UNKNOWN – requires Backstage catalog validation	Device Adapter Services, Realtime Consumer Service
Google Maps API	External SaaS	Geospatial or map visualization dependency for customer-facing interfaces.	UNKNOWN – requires Backstage catalog validation	Dashboard Service

Relationship Mapping

Business Service to Technical Service

Ops Console depends on Monitoring Service, Alarm Service, Energy Service, Dashboard Service, and Gateway Service.

Plant Console depends on Condition Monitoring Service, Predictive Analytics Service, Dashboard Service, and Gateway Service.

Production Console depends on Production/OEE Service, Quality/SPC Service, Dashboard Service, and Gateway Service.

Energy Console depends on Energy Service, Reporting and Compliance, Dashboard Service, and Gateway Service.

Technician Mobile App depends on Device Management Service, Workflow/Orchestrator, and Gateway Service.

Technical Service to Infrastructure

Identity and Access services depend on Okta, PostgreSQL, and supporting service APIs.

Monitoring and Alarms services depend on Azure Event Hub, Kafka via Dapr, TSDB, Elasticsearch, and AKS-hosted runtime components.

Device Management services depend on Elasticsearch, Azure Table Storage, BLC, EPAS, and Starfish Gateway.

Analytics and Prediction services depend on TSDB, Feature Store, and telemetry ingestion.

Production and Quality services depend on telemetry ingestion, Kafka via Dapr, and PostgreSQL.

Integration and Orchestration services depend on Kafka via Dapr, external endpoints, and a secrets management capability that is not explicitly identified in the source material.

Suggested Backstage Catalog Structure

The ideal Backstage structure should model FIJI as a single **System** with grouped **Components**, **Resources**, and **APIs**.

Backstage Entity Type	Recommended Name Pattern	Examples
System	fiji-remote-monitoring	Single top-level system for the platform
Domain	Logical grouping only in documentation or tags	identity-access, monitoring-alarms, device-management
Component	Kebab-case service identifier	authorization-service, monitoring-service, device-management-service

Component	Business application identifier	ops-console , plant-console , technician- mobile-app
API	Capability-oriented API objects	devices-api , alerts-api , telemetry-api , workflows-api
Resource	Platform CI identifier	fiji-aks-cluster , fiji-postgresql , fiji-kafka , fiji- event-hub
Group	Owning team or squad	fiji-platform , fiji-monitoring- squad , fiji- device-mgmt- squad

Recommended Component Grouping

Backstage Grouping	Recommended Components
Identity and Access	authorization-service, user-service, entitlement-service, realm-administrator-service
Monitoring and Alarms	monitoring-service, alarm-service, telemetry-cloud-alarm-service, energy-service
Device Management	device-management-service, device-adapter-datacenter, device-adapter-industrial, device-adapter-manufacturing
Analytics and Prediction	condition-monitoring-service, predictive-analytics-service

Production and Quality	production-ooo-service, quality-spc-service
Integration and Orchestration	integration-hub, workflow-orchestrator, user-automation-service, automation-service
Presentation and UX	gateway-service, dashboard-service, localization-service
Observability and Operations	audit-service, notification-service, reporting-and-compliance
Data and Semantic Models	ontology-service, erps-service
Business Applications	ops-console, plant-console, production-console, energy-console, technician-mobile-app

JSM Queue Mapping

Queue Name	Suggested Owner Group	Services
FIJI-Identity-Access	UNKNOWN – requires Backstage catalog validation	Authorization Service, User Service, Entitlement Service, Realm Administrator Service
FIJI-Data-Plane	UNKNOWN – requires Backstage catalog validation	Realtime Consumer Service, Telemetry Cloud Alarm Service, Kafka-related eventing dependencies
FIJI-Monitoring-Alarms	UNKNOWN – requires Backstage catalog validation	Monitoring Service, Alarm Service, Energy Service

FIJI-Device-Mgmt	UNKNOWN – requires Backstage catalog validation	Device Management Service, Device Adapter Services
FIJI-Analytics	UNKNOWN – requires Backstage catalog validation	Condition Monitoring Service, Predictive Analytics Service
FIJI-Production-Quality	UNKNOWN – requires Backstage catalog validation	Production/OEE Service, Quality/SPC Service
FIJI-Integration-Orchestration	UNKNOWN – requires Backstage catalog validation	Integration Hub, Workflow/Orchestrator, User Automation Service, Automation Service
FIJI-Presentation-UX	UNKNOWN – requires Backstage catalog validation	Gateway Service, Dashboard Service, Localization Service
FIJI-Observability-Ops	UNKNOWN – requires Backstage catalog validation	Audit Service, Notification Service, Reporting and Compliance
FIJI-Infrastructure	UNKNOWN – requires Backstage catalog validation	AKS, databases, Event Hub, IoT Hub, storage, gateway infrastructure

Suggested Statuspage Exposure

Service or Capability	Expose on Statuspage	Reason
Ops Console	Yes	Customer-facing portal
Plant Console	Yes	Customer-facing portal
Production Console	Yes	Customer-facing portal
Energy Console	Yes	Customer-facing portal

Technician Mobile App	Yes	Customer-facing application
Gateway Service	Yes	Direct API availability impact
Realtime Consumer Service / Telemetry Ingestion	Yes	Directly affects freshness and monitoring outcomes
Notification Service	Yes	Customer-visible alert delivery dependency
Authentication	Yes	Customer login dependency via Okta
Internal-only supporting services	No	Better represented through internal observability and CMDB relationships

Observability Mapping Suggestions

Target	What to Monitor in Dynatrace
All AKS-hosted services	CPU, memory, pod restarts, request volume, error rate, saturation, deployment health
Gateway Service	Availability, p95 latency, response codes, authentication failures, upstream dependency failures
Realtime Consumer Service	Ingestion throughput, lag, dropped messages, consumer health, scaling behavior
Monitoring Service	Rule processing latency, ingest-to-alert latency, alert generation failure rate

Alarm Service	Alarm creation/update latency, error rates, data store latency
Device Management Service	Firmware rollout success, OTA failure rate, inventory API latency
Condition Monitoring and Predictive Analytics	Processing latency, model execution latency, failure counts, feature retrieval latency
Production/OEE and Quality/SPC	Workflow latency, event processing reliability, database performance
Integration Hub	Connector health, webhook success rates, downstream failures, queue depth
Notification Service	Delivery attempts, provider failures, queue lag, template processing errors
PostgreSQL, Elasticsearch, MongoDB, TSDB	Connection pool, latency, throughput, storage health, query performance
Azure Event Hub and IoT Hub	Ingress and egress, throttling, connection errors, backlog, processing lag
Okta, SendGrid, Twilio	Synthetic availability, external API latency, failure trends

Gaps and Issues

Gap	Impact	Recommended Action
Ownership is not explicit for most services	Weak incident routing and unclear CMDB stewardship	Validate team ownership through Backstage or authoritative service registry

Products page lacks authoritative detail	Service modeling requires cross-page inference	Create a single system-of-record page or adopt JSM Assets and Backstage as source of truth
Device Adapter Services are not enumerated	Cannot create complete CI and service dependency model	Inventory deployed adapter services by segment and environment
Secrets management dependency is unnamed	Incomplete infrastructure mapping for Integration Hub and related services	Confirm and register the secret management CI
Hybrid or overlapping service boundaries are not formally documented	Operational responsibility and escalation paths may be ambiguous	Define explicit service boundaries and primary owning squad per component
Tier assignments are inferred rather than formally declared	SLO and support expectations may be inconsistent	Validate tiers through SRE governance and production maturity review
